

# Can lockers be placed in the aisle

How wide should an aisle be?

As a general rule, you'll need aisles of sufficient width to allow the safe evacuation of all the people who work on the floor served by the aisle. The minimum requirement is 28 inches wide and 7 feet, 6 inches high. OSHA suggests that permanent aisles and passageways have markings to show where aisle space is.

Do aisles have a safety rule?

This rule includes passageway floors, including aisles. Aisles should be free of obstructions and should have safe clearance so that people can easily get through them for everyday use and in case of emergency evacuations.

Do I need a guard at the end of an aisle?

1030.17.4 Guards at the end of aisles. A fascia or railing system complying with the guard requirements of Section 1015 shall be provided for the full width of the aisle where the foot of the aisle is more than 30 inches (762 mm) above the floor or grade below.

Is a step permitted in aisles serving seating?

A step is permitted in aisles serving seating that has a difference in elevation less than 12 inches (305 mm) at locations not required to be accessible by Chapter 11, provided that the risers and treads comply with Section 1030.14 and the aisle is provided with a handrail complying with Section 1030.16.

Should aisles be extra wide in highly trafficked areas?

Therefore, the OSHA suggests making aisles extra wide in highly trafficked areas. According to OSHA safety guidelines, any wall openings, including wall openings in aisles, that lead to a drop of more than 4 feet should have a rail, picket fence, roller, half door or similar barrier.

What are the minimum height and width requirements for emergency exit aisles?

In offices, minimum height and width requirements apply to emergency exit aisles. As a general rule, you'll need aisles of sufficient width to allow the safe evacuation of all the people who work on the floor served by the aisle. The minimum requirement is 28 inches wide and 7 feet, 6 inches high.
