

Introduction to solar power generation sites

What is solar power & how does it work?

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current.

What is the potential of solar energy?

Solar energy potential Earth's photovoltaic power potential. The potential for solar energy to be harnessed as solar power is enormous, since about 200,000 times the world's total daily electric-generating capacity is received by Earth every day in the form of solar energy.

When was solar energy first used?

First Practical Silicon Solar Cell: The first silicon solar cell, with an efficiency of 4%, is primarily used in space applications, including powering satellites. Energy Crisis Drives Interest: Solar energy gains attention during the oil crises, and President Jimmy Carter installs solar panels on the White House in 1979.

How do businesses use solar technology?

Businesses and industry use solar technologies to diversify their energy sources, improve efficiency, and save money. Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power cities and small towns. Learn more about the following solar technologies:

How many megawatts does a solar power station produce?

The Solar Star PV power station produces 579 megawatts of electricity, while the Topaz Solar Farm and Desert Sunlight Solar Farm each produce 550 megawatts. Learn more about photovoltaics research in the Solar Energy Technologies Office, check out these solar energy information resources, and find out more about how solar works.

How does a concentrated solar power system work?

Concentrated solar power (CSP) systems use mirrors or lenses to concentrate sunlight to extreme heat to make steam, which is converted into electricity by a turbine. A solar cell, or photovoltaic cell, is a device that converts light into electric current using the photovoltaic effect.
