

How do you measure I-V characteristics of a solar panel?

A typical circuit for measuring I-V characteristics is shown in Figure-2. From this characteristics various parameters of the solar cell can be determined, such as: short-circuit current ( $I_{SC}$ ), the open-circuit voltage ( $V_{OC}$ ), the fill factor (FF) and the efficiency. The rating of a solar panel depends on these parameters.

What are the parameters of a solar cell?

The solar cell parameters are as follows; Short circuit current is the maximum current produced by the solar cell, it is measured in ampere (A) or milli-ampere (mA). As can be seen from table 1 and figure 2 that the open-circuit voltage is zero when the cell is producing maximum current ( $I_{SC} = 0.65$  A).

What is short-circuit current in a solar cell?

The short-circuit current is the current through the solar cell when the voltage across the solar cell is zero (i.e., when the solar cell is short circuited). Usually written as  $I_{SC}$ , the short-circuit current is shown on the IV curve below. IV curve of a solar cell showing the short-circuit current.

What determines the short circuit current of a solar cell?

The short circuit current of the solar cell depends on the area of the cell. The output current is directly proportional to the cell area. Larger the cell area the amount of generated current is also large and vice versa.

What are the parameters of a solar cell under STC?

Under STC the corresponding solar radiation is equal to  $1000$  W/m<sup>2</sup> and the cell operating temperature is equal to  $25^{\circ}\text{C}$ . The solar cell parameters are as follows; Short circuit current is the maximum current produced by the solar cell, it is measured in ampere (A) or milli-ampere (mA).

What factors affect the rating of a solar panel?

The rating of a solar panel depends on these parameters. The short-circuit current is the current through the solar cell when the voltage across the solar cell is zero (i.e., when the solar cell is short circuited). is due to the generation and collection of light-generated carriers.
