

What are thin-film solar panels?

Thin-film solar panels use a 2nd generation technology varying from the crystalline silicon (c-Si) modules, which is the most popular technology. Thin-film solar cells (TFSC) are manufactured using a single or multiple layers of PV elements over a surface comprised of a variety of glass, plastic, or metal.

What is thin-film solar cell technology?

Thin-film solar cell technology is the second generation of photovoltaic (PV) solar cells, featuring a thin semiconductor going from a few nanometers to micrometers. One of the most popular types of thin-film solar technology is the Copper Indium Gallium Selenide (CIGS).

What are the different types of thin-film solar technology?

One of the most popular types of thin-film solar technology is the Copper Indium Gallium Selenide (CIGS). CIGS solar cells have proven to deliver a high power output, are cost-efficient, feature a lower CO₂ footprint, and have several other benefits.

Are thin-film solar panels better than crystalline solar panels?

These thin, light-absorbing layers can be over 300 times thinner than a traditional silicon solar panel. Thin-film solar cells have built-in semiconductors, making them the solar panels the lightest panels available. However, they don't operate as efficiently as crystalline solar panels, so you need more to generate the same amount of electricity.

What is the difference between a solar inverter and a thin-film solar panel?

The major difference is you can install them on more surfaces, such as on caravans and boats. Also, because they're so light, you don't need the same structural support you would for a normal solar panel system. You can effectively roll thin-film solar panels out like a carpet, then the installer just needs to connect them to the inverter.

Where can I buy thin-film solar panels in the UK?

You can buy thin-film solar panels in the UK, but as they're not as common as standard solar panels, you should expect the process of finding an installer to take longer. Here are a few companies that provide thin-film solar panels. Midsummer Energy sells a range of thin-film solar panels, from 70 watts up to 500 watts.
